WHY THIS PS?

Understanding Crutch Users

Who our users are?

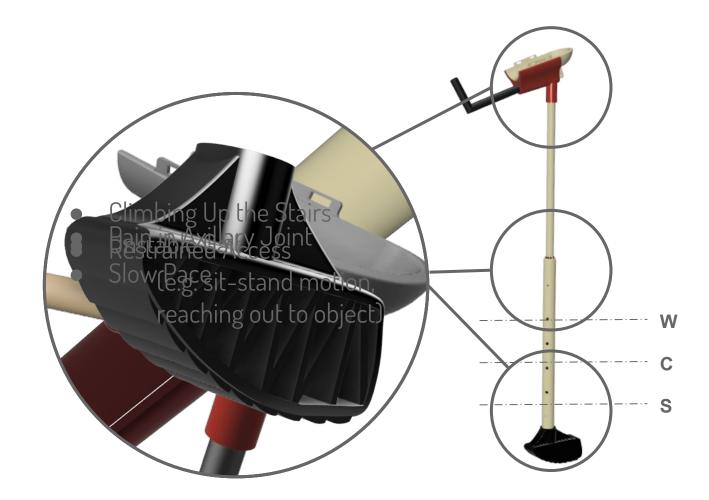

- Osteoarthrosis and Allied Disorders
- Orthopedic Impairment of Lower
 Extremity
- Absence or Loss of Lower Extremities
- Rheumatoid Arthritis
- Cerebral Palsy
- ☐ Intervertebral Disc Disorders

What problems do they face in common?

- ☐ Pain at Axillary Joints
- Restrained Access
- Slower Pace
- Climbing Up the Stairs
- ☐ Unstable Gait
- ☐ Limited Adaptability

OUR APPROACH

Our Design

PROOF OF CONCEPT

Testing Our Model

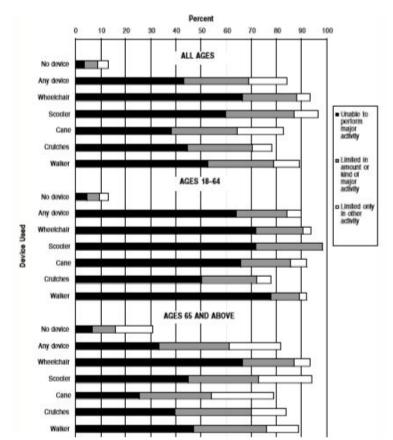

FUTURE GOALS

Design Alterations

- Weight reduction through extensive research on materials.
- Introduction and testing of a more robust height adjustment mechanism.
- Biomechanical analysis followed by design optimisation through experimentation with our current model.
- Improving ergonomics hence freeing the user from the crutch.

Commercial Potential

Type of crutch	Approx cost
Simple Axillary Crutch	INR 1500 for 1 pair
Forearm Crutches	INR 3000 for 1 pair
M+D elbow crutch	USD 300 for 1 pair (INR 21000)
Our Crutch	INR 4000 for 1 pair

THANK YOU

Market Analysis

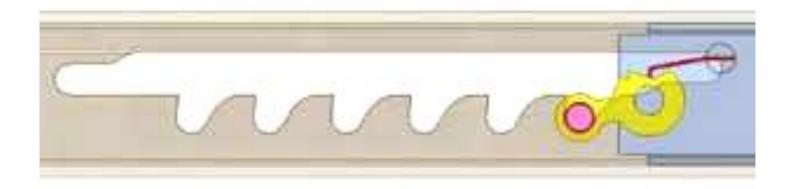

Table H. Leading conditions[†] associated with the use of crutches, all ages.

Condition	Persons (1000s)	Proportion of device users (%)
All conditions	492	100.00
1 Osteoarthrosis and allied disorders	59	11.92
2 Orthopedic impairment of lower extremity	55	11.09
3 Absence or loss of lower extremity	47	9.45
4 Chronic injuries or late effects of injuries	40	8.04
5 Orthopedic impairment of back or neck	25	4.98
6 Rheumatoid arthritis and other inflammatory polyarthropathies	21	4.33
7 Cerebral palsy	20	4.02
8 Orthopedic impairment of hip and/or pelvis	19	3.92
9 Intervertebral disc disorders	17	3.43
10 Other paralysis	11 *	2.32 *

[†]Conditions reported as the main cause of functional or activity limitation (see text).

[&]quot;Standard error exceeds 30 percent of the estimate.
